

Satelite Radio is the logical next step for the airwaves. The sound is so superior to broadcast signals. The choice of listening stations is much more broad than the broadcast outlets provide. XM is a private company, operating under the laws of our fine United States.

It would be indeed a tragedy if saletlit radio were not allowed to prosper. Millions of American people will find satelite radio so superior to brodcast, it would be a travisty of justice to stifle this exciting new media. I LOVE MY XM RADIO. DO NOT SHUT IT DOWN OR LIMIT WHAT IT CAN BROADCAST. Cable TV can broadcast what broadcast can not, why should satelite radio be penalized?
